Establishment of a Battery Pilot Laboratory

ENEOS Materials Corporation has established a laboratory equipped with pilot-scale facilities capable of battery evaluation in Nantong, China (Nantong Technical Center) in collaboration with SCM Industrial Chemical Co., Ltd. (based in Shanghai, China; hereinafter “SCM”), and on March 13, held an opening ceremony for the pilot lab together with SCM.

Founded in 2006, SCM is a major Chinese trading company in the field of specialty chemicals, and is engaged in supplying battery materials to major electric vehicle (EV) and battery manufacturers in China.

While we already have laboratory functions in Japan, Europe, and China, we worked with SCM to completely renovate their existing lab and jointly introduced cutting-edge pilot-scale equipment capable of battery manufacturing. By equipping the lab with evaluation equipment and technologies equivalent to those used by our customers, we aim to accelerate the development of battery binders and expand our business not only in the Chinese market but also globally. We have already begun exploring collaborations with select customers.

Overview of SCM

Name	SCM Industrial Chemical Co., Ltd.
Website	https://www.scmchem.com/
Address	Room 1-7, 12th Floor, No. 6088, Humin Road, Minhang District, Shanghai
Representative	Zhanping Gong
Sales revenue	Approximately 1 billion RMB
