
Quality Policy

To ensure that products of high value to customers can be used safely and with confidence, we will conduct production activities in accordance with the following policy.

1. Improve customer satisfaction

We will meet customer needs and expectations by manufacturing products using production technology that is technologically superior in all aspects, including product quality, cost, safety, environmental impact, and delivery time.

2. Continual improvement of quality management system

To provide customers with products that have no defects, we will operate a quality management system that complies with ISO9001 and continually improve process performance.

3. Implement responsible activities and improve work efficiency

Each person will carry out their work with the awareness that “the post-process is the customer” and work rationally and efficiently by clarifying the purpose and goals of their work.
